

PlasmaFlow™

MANAMED™

DECLARE WAR ON OUR COMMON ENEMY

**IN THE BATTLE TO PREVENT DEEP VEIN THROMBOSIS,
PLASMAFLOW IS YOUR WEAPON.**

Mechanical Prophylaxis for DVT Protocol Made Simple

Portable and Lightweight Increase patient compliance with a portable sequential device that eliminates the use of tubes and hoses.

Visual Verify the pressure being applied to the lower extremities.

Limited Complications Unlike prescriptive drugs, PlasmaFlow helps mitigate the risk of bleeding and does not require weekly blood monitoring.

PlasmaFlow allows a multimodal approach for venous thromboembolism (VTE) for high-risk orthopedic surgery patients. Current board guidelines indicate that aspirin is not appropriate as the only option for the prevention of DVT.

PlasmaFlow fits into the change in healthcare. The Defecit Reduction Act of 2005 requires hospitals to identify Hospital-Acquired Conditions. DVT and Pulmonary Embolism fall underneath this act which may result in penalties and payment reductions.

PlasmaFlow is covered by most insurance. Private Pay Organization recongnizes the significant cost savings when a patient does not have to be readmitted to a hospital. PlasmaFlow fits into protocol driven medicine.
